RECEIVED

MAY 15 2009

Grant Beck,

We are greatly concerned about the legal notice in last weeks N.U.P (5-7-09) dealing with the plan for the city of Yelm to supply its 1000 plus annexed acreage S.W. with water by new sources. It was a very long and drawn out legal notice. From what we understand if this is indeed done, it would cause no "Non-Significant" impact on the environment. How could this be? So many of our own neighboring wells, which supply water for our homes is from subsurface aquifers, the same aquifer for the planned wells and the pumping for the acreage mentioned above.

There has to be great ground water impacts to surrounding homes, farms, the who area, our local wells. Thompson creek runs thru our property, which drains the area directly next to this proposed well-field. How will this creek be effected, Misqually river?

Grant Beck

Please consider performing an Environmental Impact Statement. This whole area is such an important Geographical area. There will be so much interaction from this proposed well-field affecting the watersheds natural environmental and affecting all of us "neighbors" with probable environmental damage in a large scale.

Will the city be responsible for the damage that may occur to our wells, our properties natural aquifers in the future ~~ect~~, ect.

Thank-you

Debbie Moss
