Subject: Proposed Five-fold Water Withdrawal and MDNS

5/20/09

Dear Mr. Grant Beck,

It has been brought to our attention that the City of Yelm is in the process of using an MDNS instead of an EIS involving public input for the proposed pumping of 5 times more water than current uses. Our well is our only source of water and any impact on the aquifer would definitely have an impact on our lives and home.

Why is the City of Yelm not required to review all of the environmental effects that might harm its citizens and it surrounding homes?

Who will pay for a new well and pumping equipment if this 5 time increase dries up our well?

We do hope that you can help us make sure that the appropriate course of action is taken to ensure a bright future for us all. Thank you for your help in advance!

Sincerely,

Jeffrey and Joanna Baird
