Subject: Water Rights

I am a concerned homeowner that lives just outside Yelm city limits. We have lived here for 17 years and have a well that could be compromised if the city of Yelm is allowed to go forward with their city water system plan which will increase their water withdrawal by 5 times. This is a huge amount of water to justify taking by stating that they have determined it is a matter of non-significance. The city of Yelm has over pumped the aquifer for several years already without required city water system plan in place, They try to slip this major issue thru the system without giving the public enough notice to give our input.

As a homeowner that has two children who attended Yelm schools from grade school thru graduation, and have bought our fuel, food, and most supplies from Yelm merchants for the past 17 years I feel I have the right to ask " Why not have an Environmental Impact Statement In place?" This is truly a matter of significance to me and my family.

Maybe an investigation should be done to see who has the most to gain here. The citizens of Yelm, or some city officials. I hope if this (what I call a scam) is allowed and my well dries up That I have the right to hold the city of yelm responsible for my losses.

Bill Moss,
