To my representatives,

I am greatly concerned that the Yelm City Council is not taking appropriate care of our water situation in Yelm. It has been proven that they have already been using more than our aquifer can reasonably support. An Environmental Impact Statement should be required to protect our water supply. Why would the Yelm City Council want public input and consider the situation the way it is? Do they have a special agenda we should not know about? Do they have something to hide, special interests even if these might end up in drying up their constituents' wells?

I am asking for your support in this matter of very grave concern to us,
